MEMORANDUM

TO: Jim McGuire, Removal Manager
Emergency Response and Removal Branch, EPA Region 4

FROM: Shawn Cecil, Manager SAC
Superfund Branch, Kentucky Division of Waste Management (KDWM)

DATE: July 25, 2011

SUBJECT: Request for Time Critical Removal Action
Black Leaf Chemical; KYD980559520
Louisville, Jefferson County, Kentucky

KDWM requests that EPA Region 4 take time-critical removal action at the Black Leaf Chemical site in Louisville, Kentucky. High levels of contaminants were identified in surface soils during an October 2010 sampling event conducted by an EPA START Team. The findings of the sample analysis indicate that concentrations present, the nature of the contamination and the surrounding property use require time-critical action that the Commonwealth of Kentucky is not well-positioned to take at this time.

The findings of the START Team assessment are that significant concentrations of pesticides are present, including surface interval soils; the most significant levels of pesticides were detected in surface samples containing alpha-BHC at levels 18,181 times the RSL, DDT at levels 217 times the RSL, and Dieldrin at levels 600 times the RSL. Pesticide concentrations were most elevated around a former manufacturing building but Dieldrin was elevated in a surface sample over 325 feet away from the manufacturing building along the northern edge of the property bordering the neighborhood. Dieldrin was also identified over 625 feet away from the manufacturing building, indicating that migration has occurred and is possible in the future. KDWM has additional concerns regarding the potential for presence of dioxins and recommends including this group of constituents in future soil and groundwater sampling and analysis. In addition, PAH constituents were detected above RSLs over the entire property in surface soils. PAHs were detected in subsurface soil samples in BLC-SB-15, which is located along the northern edge of the property adjacent to the neighborhood, and BLC-SB-23, which is located in an open field in the northeastern portion of the property. No off-site samples have been collected to date, leaving the presence of off-site contamination unknown at this time.

The site borders a residential neighborhood and is not secured. The existing fence and gate are in disrepair, allowing trespassers onto the property. There is a licensed daycare facility located within 200 feet of the site and the same distance from a sample location in which elevated hazardous substances including Dieldrin and PAHs have been found. The property is located adjacent to a neighborhood in which KDWM believes is an Environmental Justice area (95% of the residents are members of a minority group).

KDWM recommends that EPA conduct time-critical removal actions at the site and that off-site soil sampling at select locations in the residential neighborhood and on the daycare property be conducted to determine if contamination has migrated off-site. In addition, groundwater sampling is recommended due to elevated pesticides and PAHs in some subsurface samples. While few groundwater users were identified using various databases, groundwater sampling in conjunction with a door to door survey in the area may be warranted.

KDWM considers this a priority site and your consideration is appreciated.

Supplemental Information

Property Ownership

- Tobacco By-Products and Chemical Corporation from 1924 - 1953
- Sold in 1953 to Virginia-Carolina Chemical Corporation
- Sold in 1955 to Diamond Black Leaf Company
- Sold in 1957 due to a Plan of complete Liquidation to sole shareholder: Diamond Alkali Company
- Sold in 1959 to Schenley Distillers, Inc.
- Changed hands several times until purchased by current property owner, Louisville Industrial Park

It is notable in the ownership chain that, in particular, Diamond Alkali has a history as a pesticide manufacturer. A Diamond Alkali site in New Jersey (listed on the NPL) was found to have significant dioxin contamination as a result of the manufacture of DDT, a contaminant also present at the Kentucky site. KDWM recommends that dioxins be included as a chemical of potential concern (for both soil and groundwater) going forward as dioxin testing was not part of the October 2010 sampling event.

CERCLA History

A Preliminary Assessment (PA) was conducted in 1987. At that time, no further CERCLA action was recommended due to a low HRS score. Community drinking water supplies were not impacted by activities at the site and all site drainage was directed into the city sewer system. The site was recommended for a NFRAP review in 2009 to determine if conditions at the site had changed enough to warrant further action. During a 2009 site visit, numbers of drums containing hazardous wastes were observed including some that were leaking. KDWM removed the drums. At that time, KDWM learned of plans to develop the site into a residential complex. Given the potential future land use, preliminary HRS scoring exceeded 28.5 and a Site Inspection was initiated.

EPA's START Team conducted soil sampling in October 2010. Results from that event are attached. The SI was submitted to EPA's Site Evaluation Section in February 2011. KDWM has not received comments from EPA, however, we have recently asked for an expedited review of that report.

Site Location

The site is located in northwestern Jefferson County at 1391 Dixie Highway, Louisville, Kentucky. It is located on a portion of a 29-acre parcel of land currently owned by Louisville Industrial Park, LLC. GPS coordinates at the 17th Street entrance are Latitude 38.232967° North and Longitude 85.782500° West The site is situated in an inner city area known as the Park Hill neighborhood and is bordered by a minority neighborhood to the north, a large rail yard to the south, and industry/commercial areas to the east and west. At present, the site is abandoned, however, the fencing and gates at the site do not prevent vehicular or pedestrian access.

Pathways

The Soil Exposure Pathway is the pathway of concern. The Groundwater Migration Pathway was not identified as a concern due to insufficient targets. Only four (4) domestic drinking water wells were identified within a 4-mile radius. Those wells were not surveyed, so it is not know if they are in use. The Surface Water Pathway was not identified as a concern because surface water flows in the sewer system and is treated before being released into the Ohio River. The probably point of entry (PPE) is located over two (2) miles from the site,

therefore, this pathway is not to be considered under the HRS rule. The Air Migration Pathway was not evaluated due to the fact that there are no active industrial activities or known air emissions from activities at the site.

The site is currently abandoned. There are no workers on site, however, the site is not adequately secured and what appeared to be homeless people have been observed at the site. A chain link fence surrounding the site has large gaps and the 17th Street gate is no longer present (previous gate has been removed). The northern portion of the property is bordered by a low income, minority neighborhood. Approximately 25 single family homes are presently located within 200 feet of the site.

The property owner, Louisville Industrial Park, had previously proposed to construct a low-income residential housing developing on the site. Various proposals had been submitted, however, most proposals included construction of 76 single and multi-family residences on the site. Those potential future residents were included as targets to justify the soil sampling for the SI, however, the proposal to develop a neighborhood has since been denied by the City of Louisville. The property owner still believes the site has the possibility of being developed for residential use.

There are no known schools within 200 feet of the site. There is one (1) daycare licensed by the Kentucky Cabinet for Health and Family Services within 200 feet of the site. That daycare is located at 1612 Wilson Avenue and is an in-home daycare known as A Grandma's Place. The capacity of that daycare is six (6) children. The daycare has not been contacted. For purposes of the SI, it is assumed that six (6) children are present at the daycare at all times.

The 2000 Census indicates that there are 707 residents within ¼ mile of the site. Approximately 95% of that population is African American or other minority race. The population within a 1 mile radius is 14,902.

Conclusions

The site borders a residential neighborhood and is not well secured. A licensed daycare was identified within 200 feet of the site and within 200 feet of BLC-SS-18, which contained Dieldrin and several PAH constituents at levels equaling or exceeding RSLs.

Elevated pesticides and PAH constituents were detected primarily in surface samples in the area around the manufacturing building. Alpha-BHC was detected in a subsurface sample in the area around the manufacturing building as well. While most pesticides were detected primarily within 200 feet of the manufacturing building, Dieldrin was elevated in a surface sample over 325 feet away from the manufacturing building along the northern edge of the property bordering the neighborhood. Dieldrin was also identified over 625 feet away from the manufacturing building near the southeastern edge of the property.

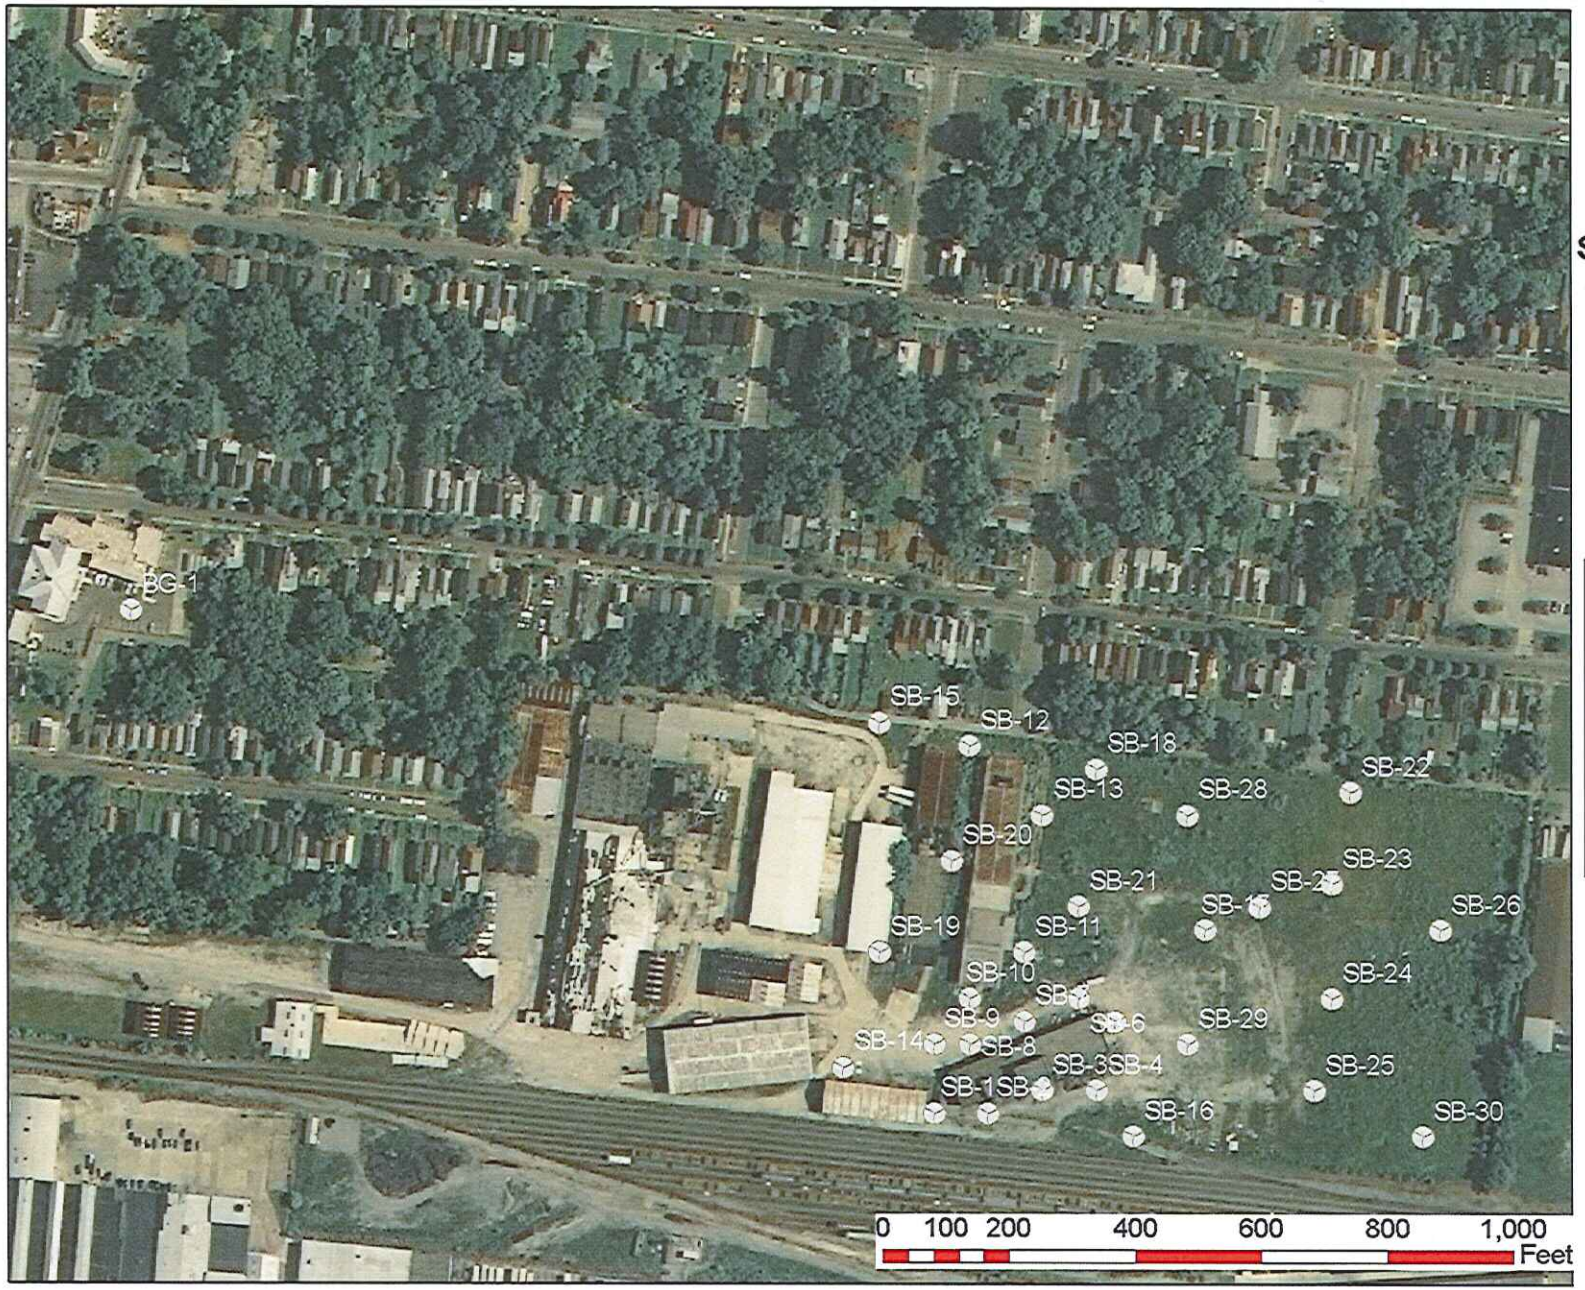

PAH constituents were detected above RSLs all over the property in surface soils. PAHs were detected in subsurface soil samples in BLC-SB-15, which is located along the northern edge of the property adjacent to the neighborhood, and BLC-SB-23, which is located in an open field in the northeastern portion of the property. Since no off-site sampling was conducted (other than the background sample), it is not known if any contaminants have migrated off site. Due to the fact that elevated levels of pesticides and PAHs were detected close to the property boundaries, it is possible that contamination has migrated off-site and could potentially be impacting residential properties to the north of the site. Also, some samples contained pesticides at levels that may be above EPA's emergency action levels.

KDWM recommends that EPA conduct a Time Critical Removal Action at the site and recommends that off-site soil sampling at select locations in the residential neighborhood and on the daycare property be conducted to determine if contamination has migrated off-site. In addition, groundwater sampling is recommended due to elevated pesticides and PAHs in some subsurface samples. While few groundwater users were identified using various databases, groundwater sampling in conjunction with a door to door survey in the area may be warranted.

KDWM considers this a priority site and your consideration is appreciated.

Notes:

bold - Analyte was detected

bold and shaded - Analyte concentration exceeds the associated RSL for direct contact with residential soil

J - The identification of the analyte is acceptable; the reported value is an estimate.

mg/kg - Milligrams per kilogram

NL - No limit established

R - Rejected value

RSL - Regional Screening Level (Updated November 2010)

U - Analyte was analyzed for but not detected above the associated value

ug/kg - Micrograms per kilogram

BLACKLEAF CHEMICALS
SUMMARY OF ANALYTICAL RESULTS

Sample ID	Residential Soil RSL	BLC-SB-27	BLC-SS-28	BLC-SB-28	BLC-SS-29	BLC-SB-29	BLC-SS-30	BLC-SS-34	BLC-SB-30
Location		BLC027	BLC028	BLC028	BLC029	BLC029	BLC030	BLC030	BLC030
Collection Date		10/27/2010	10/27/2010	10/27/2010	10/27/2010	10/27/2010	10/27/2010	10/27/2010	10/27/2010
Matrix		Subsurface Soil	Surface Soil	Subsurface Soil	Surface Soil	Subsurface Soil	Surface Soil	Surface Soil	Subsurface Soil
Sample Type		Field Sample	Field Sample	Field Sample	Field Sample	Field Sample	Field Sample	Field Duplicate	Field Sample
Volatile organic compounds (ug/kg)									
(m- and/or p-)Xylene	NL	4.7 U	4.3 U	4.3 U	**0.8 J**	4.4 U	5.5 UJ	6.1 UJ	4.8 U
1,2,3-Trichlorobenzene	49000	4.7 U	4.3 U	4.3 U	4.3 UR	4.4 U	**1.3 J**	6.1 UR	4.8 U
1,2,4-Trichlorobenzene	22000	4.7 U	4.3 U	4.3 U	4.3 UR	4.4 U	**1.1 J**	6.1 UR	4.8 U
1,2-Dichlorobenzene	1900000	4.7 U	4.3 U	4.3 U	4.3 UR	4.4 U	5.5 UJ	6.1 UR	4.8 U
1,3-Dichlorobenzene	NL	4.7 U	4.3 U	4.3 U	4.3 UR	4.4 U	5.5 UJ	6.1 UR	4.8 U
1,4-Dichlorobenzene	2400	4.7 U	4.3 U	4.3 U	4.3 UR	4.4 U	5.5 UJ	6.1 UR	4.8 U
Acetone	61000000	9.3 U	8.7 U	**13**	8.6 UJ	8.9 U	11 UJ	12 UJ	9.5 UJ
Benzene	1100	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Carbon disulfide	820000	4.7 U	4.3 U	4.3 U	**2.1 J**	4.4 U	**0.61 J**	**1.4 J**	4.8 U
Chlorobenzene	290000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Chloromethane	120000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 U	6.1 U	4.8 U
Cyclohexane	7000000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Ethyl Benzene	5400	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Isopropylbenzene	2100000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Methyl Acetate	78000000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 U	6.1 U	4.8 U
Methylcyclohexane	NL	4.7 U	4.3 U	4.3 U	**24 J**	4.4 U	5.5 UJ	6.1 UJ	4.8 U
o-Xylene	3800000	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Tetrachloroethene (Tetrachloroeth	550	4.7 U	4.3 U	4.3 U	4.3 UJ	4.4 U	5.5 UJ	6.1 UJ	4.8 U
Toluene	5000000	4.7 U	4.3 U	4.3 U	**1.3 J**	4.4 U	5.5 UJ	6.1 UJ	4.8 U

Notes:

bold - Analyte was detected

bold and shaded - Analyte concentration exceeds the a

J - The identification of the analyte is acceptable; the re

mg/kg - Milligrams per kilogram

NL - No limit established

R - Rejected value

RSL - Regional Screening Level (Updated November 2

U - Analyte was analyzed for but not detected above th

ug/kg - Micrograms per kilogram
