Data Validation Summary

Arcadis U.S., Inc. (Arcadis) performed a level III data validation evaluation of the analytical data collected during the Precision National Plating site investigation. The data evaluation was conducted in accordance with the United States Environmental Protection Agency's (USEPA) Data Validation Functional Guidelines for Evaluating Environmental Analyses, "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review," dated October 1999, and "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review," dated October 2004 ("the USEPA Guidance"). The following is a summary of the analytical data review for samples collected and analyzed from January through March 2019. The samples were submitted to TestAmerica Laboratories located in Edison, New Jersey for analysis. The TestAmerica sample delivery groups (SDGs) evaluated for this report include: 460-173861-1, 460-173931-1, 460-174022-1, 460-174023-1, 460-1741031-1, 460-174104-1, 460-175336-1, 460-175338-1, and 460-177043-1.

The samples were analyzed using the following methods:

EPA Method 200.7 for metals

EPA Method 245.1 for mercury

EPA Method 7196A for hexavalent chromium

The data were evaluated based on the following parameters according to the USEPA Guidance for Level III data validation:

data completeness

holding times

blanks

duplicates and ICP serial dilution

matrix spike/matrix spike duplicate recoveries (MS/MSD)

laboratory control spike/laboratory control spike duplicate recoveries (LCS/LCSD)

A review of the laboratory reports revealed no issues which caused the data to be qualified.

The sample temperature, hold times, calibrations, laboratory control samples, duplicates, serial dilutions, and laboratory blanks were all within compliance criteria for all samples.

The following items were noted during the data review:

There was an omission on the chain of custody submitted with SDG 460-174022-1 such that no analyses were selected for sample 460-174022-11 (Cinder Block Seep). The laboratory logged in the sample for analysis for hexavalent chromium and total chromium, the same as the other samples in the batch, and notified Arcadis. Arcadis confirmed via email that these were the correct analyses required for the Cinder Block Seep sample and the analyses were performed accordingly.

In metals batch 460-590667, which included samples from PNP SDG 460-175336-1, the relative percent difference between the concentrations of zinc in the initial result and the duplicate analysis performed along with the batch was greater than 20%. However, the concentrations of zinc in the sample and the duplicate were less than five times the method detection limit, so the criteria for comparison becomes the method detection limit. The difference in results is not greater than the method detection limit. The sample used for the duplicate analysis was not a PNP sample. All of the other QA/QC parameters were in compliance, so the results are not qualified.

Summary of Quality Assurance/Quality Control Evaluation of Data

Based upon the QA/QC review, the project data are valid and available for use in site characterization without qualification.
