2) Tribal Historical Preservation Officer (THPO)

Name: Bettina Washington, THPO **Telephone:** (508) 645-9265 ext. 175

Comments:

Physical Site Characterization

Background Information:

The Ried Cleaners Site (the Site) is located at 218 Main Street in Great Barrington, Berkshire County, Massachusetts (MA). The approximately 0.29-acre property is identified on Town of Great Barrington Tax Assessor's Map number (No.) 14 as Lot No. 202. The property contains a one-story building in the southeast corner of the Site that is approximately 7,890 square feet, which was built in 1930. There was a second building, a one-story dry-cleaning building with no basement, totaling 1,056 square feet, constructed in 1900 that was located in the southwest portion of the site which was demolished in 2008. The site is bordered to the north by a savings bank and Rosseter Street; to the west by residential and commercial properties; to the south by a United States Postal Service (USPS) facility and commercial properties; and to the east by Main Street.

The property was used as a dry-cleaning business for over 60 years until it ceased operations in 2006. In August 2008, the southwest building was demolished.

REMOVAL PRELIMINARY ASSESSMENT

On 12 September 2008, preliminary excavation work was conducted at the site to determine the location of underground storage tanks (USTs) on the south side of the property, in the vicinity of the demolished building. Four USTs were uncovered: two were reportedly used for storing tetrachloroethylene (PCE), and were oriented vertically, each with a cone-shaped bottom; and two were used to store heating oil. At least one aboveground storage tank (AST), previously located in the vicinity of the USTs, was also used to store PCE. Prior to 12 September 2008, a 10,000-gallon UST was removed from the northwest corner of the property.

Also on 12 September 2008, four floor drains were found in the footprint of the former building, and soil samples were collected from beneath the former floor drains at the points of discharge. The soil samples were analyzed for volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), polychlorinated biphenyls (PCBs), and total metals including arsenic, cadmium, chromium, lead, and mercury. Elevated concentrations of PCE [maximum of 181,000 milligrams per kilogram (mg/kg)] were detected in the soil samples. Trichloroethylene (TCE) was also detected, at a maximum concentration of 11.2 mg/kg.

On 15 September 2008, the four USTs were removed from the vicinity of the demolished building. Photoionization detector (PID) headspace screening of soil from the UST grave indicated 120 parts per million (ppm), which constituted a reportable release as listed in the Massachusetts Contingency Plan (MCP). The Massachusetts Department of Environmental Protection (MassDEP) was notified of the release, and assigned release tracking number (RTN) 1-17142. On 24 September 2008, MassDEP issued a Notice of Responsibility (NOR) for the release.

In December 2008, indoor air samples were collected from the remaining site building. PCE was detected in the indoor air samples at up to 0.0445 parts per million (ppm) or 0.302 milligrams per cubic meter (mg/m^3).

In April 2009, Eco-Genesis advanced soil borings on the property, collected soil samples from the borings, and installed and sampled three groundwater monitoring wells. In addition, soil gas vent points were installed in nine boring locations. Groundwater was encountered between 3 and 6 feet below ground surface (bgs). Groundwater flow is suspected to flow from northwest to the southeast. PCE was detected at maximum concentrations of 89.7 mg/kg in soil and 108 milligrams per Liter (mg/L) in groundwater.

In February 2010, Eco-Genesis installed an additional three wells (MW-4 through MW-6) on the Site and the adjacent church property to the northwest. Groundwater samples were collected from the new and existing monitoring wells. Results indicated maximum concentrations of PCE at 119,000 micrograms per Liter ($\mu\text{g}/\text{L}$); TCE at 970 $\mu\text{g}/\text{L}$; and cis-1,2-dichloroethylene (cis-1,2-DCE) at 26,300 $\mu\text{g}/\text{L}$.

Indoor air sampling of residences and businesses in the vicinity was also conducted. The results of this sampling event were not available.

In November 2010, on behalf of MassDEP, Shaw Environmental, Inc. (Shaw) installed monitoring wells MW-7 and MW-8 on the USPS property south of the site; MW-9 and MW-10 on the Masonic Temple property south of the USPS facility; and MW-11 and MW-12 on the Reid Cleaners Site.

REMOVAL PRELIMINARY ASSESSMENT

Soil samples were collected from the borings during well installation. Shaw collected groundwater samples from the existing wells, newly installed wells, and monitoring wells on adjacent properties. PCE was detected in groundwater samples at a maximum concentration of 94,000 micrograms per Liter ($\mu\text{g}/\text{L}$).

Shaw also conducted test-pit excavation in the area of the former western building. Volatile odors were noted during excavation, and elevated PID readings were recorded. Increasing PID readings during one excavation were cause for concern, and the excavation was stopped due to safety considerations. PID screening results for Test Pit 1 (TP-1) ranged from 398 ppm to 1,000 ppm, with the highest detection occurring within the former UST area. PID screening results from TP-2 and TP-3 were consistently greater than 9,999 ppm, and a strong chlorinated solvent odor was detected while performing the test-pit excavations. The highest PID screening result detected from TP-4 was 26 ppm, but no solvent odor was detected while excavating the test pit. One soil sample was collected from each of the test pits, and the soil samples were submitted for VOC, VPH, and EPH laboratory analysis.

Analytical results of the samples collected from the test-pits indicated that the following 10 VOCs were detected in soil in one or more samples: 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, 4-methyl-2-pentanone, cis-1,2-dichloroethylene (cis-1,2-DCE), n-butylbenzene, n-propylbenzene, sec-butylbenzene, PCE, and TCE.

The highest detected concentration of PCE was found in soil sample TP-3 at a concentration of 5,600 mg/kg; and the second highest detected concentration of PCE was found in sample TP-2 at a concentration of 2,100 mg/kg. The highest detection of cis-1,2-DCE was found in sample TP-4 at a concentration of 0.011 mg/kg. The highest detection of TCE was found in sample TP-4 at a concentration of 0.0044 mg/kg. Chlorinated solvent detections from samples TP-2 and TP-3 exceeded the MCP Method 1 S-1, S-2, and S-3 soil standards.

The seven remaining VOC detections in soil were petroleum-related compounds and included 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, 4-isopropyltoluene, 4-methyl-2-pentanone, n-butylbenzene, n-propylbenzene, and sec-butylbenzene. The highest detection of a petroleum-related VOC was the detection of 4-methyl-2-pentanone in soil sample TP-1 at a concentration of 2.8 mg/kg, which exceeded the MCP Method 1 S-1/GW-1 soil standard.

The property was claimed by the town of Great Barrington for back taxes. The town subsequently obtained an EPA Brownfields grant to determine if any hazardous materials were present at the Site.

In July and September 2019, TRC Environmental Corporation (TRC) conducted a limited inspection for hazardous materials (hazardous materials inventory) at the Site. Activities included an asbestos survey of the remaining building; collection and analysis of debris/building material samples for asbestos; sampling and field analysis of paint chips for lead; sampling and analysis of caulking and glazing building components for PCBs; and documentation of other hazardous materials, such as mercury-containing items (electrical switches, thermostats, etc.). Analytical results revealed that five (5) types of building materials sampled contained $\geq 1\%$ asbestos. The X-Ray Fluorescence (XRF) field testing results indicated that levels of lead on surfaces ranged between 0.01 milligrams per cubic centimeter (mg/cm^2) (lower limit of quantification of the XRF)

REMOVAL PRELIMINARY ASSESSMENT

and 15.4 mg/cm². Laboratory results of the analysis of the caulking bulk samples did not identify the presence of PCBs above 50 ppm, indicating the sampled materials are not considered a PCB Bulk Product Waste. Two (2) of the three (3) samples had detectable concentrations of PCBs: 1.1 ppm in one sample of exterior door caulking (01), and 4.2 ppm in one sample of exterior window caulking (03). The remaining sample did not have detections of PCBs above the laboratory reporting limits.

On 6 November 2019, EPA On-Scene Coordinator (OSC) Mike Cofsky, Weston Solutions, Inc. Superfund Technical Assessment and Response Team (START) member Eric Ackerman, MassDEP representative Caprice Shaw, and Town of Great Barrington Assistant Town Manager Chris Rembold met at the site to conduct a site reconnaissance. START member Ackerman conducted a safety and operations meeting, and START signed the Site-specific Health and Safety Plan (HASP). START member Ackerman established a support zone and calibrated the air monitoring instruments, including a MultiRAE and a Ludlum 19A gamma radiation meter (MicroR). All personnel viewed and discussed the contamination area at the rear (western) portion of the property where the former dry cleaning building and PCE and oil tanks were removed. All personnel also discussed possible future sampling activities, and START member Ackerman photodocumented the site and marked the property for DigSafe. No readings above background were noted on the air monitoring instruments.

Description of Substances Possibly Present, Known or Alleged: Asbestos, PCBs, PCE, TCE and VOCs.

Existing Analytical Data

() Real-Time Monitoring Data:

(X) Sampling Data:

- Phase I Initial Site Investigation & Tier Classification Submittal. 11 September 2009. Eco-Genesis Corporation.
- Subsurface Investigation Report Former Ried Cleaners Site. February 2011. Shaw Environmental Inc.
- Hazardous Materials Inspection Report. 2 October 2019. TRC Environmental Corporation.

Potential Threat

Description of potential hazards to environment and/or population-identify any of the criteria for a Removal Action (from NCP) that may be met by the site under 40 CFR 300.415 [b] [2].

- i. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances, pollutants or contaminants.
- ii. Actual or potential contamination of drinking water supplies or sensitive ecosystems.
- iii. Hazardous substances or pollutants or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release.

REMOVAL PRELIMINARY ASSESSMENT

- iv. High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface, that may migrate.
- v. Weather conditions that may cause hazardous substances or pollutants or contaminants to migrate or be released.
- vi. Threat of fire or explosion.
- vii. The availability of other appropriate federal or state response mechanisms to respond to the release.
- viii. Other situations or factors that may pose threats to public health or welfare or the environment.

Prior Response Activities

PRP STATE FEDERAL OTHER

Brief Description: Private developers contracted Eco-Genesis to conduct test pitting to determine extent of contamination; MassDEP contracted Shaw Environmental and Infrastructure to conduct a Site Investigation; and the Town of Great Barrington contracted TRC and used a Brownfields Grant to investigate hazards in the on-site building.

Priority for Site Investigation

High Medium Low None

Comments: Residential and commercial properties are near the site.

Field Quality Control Procedures

SOP Followed

Deviation from SOP

Comments:

Sampling was conducted in accordance with the site Sampling and Analysis Plan (SAP) that was prepared as a separate document, entitled *Sampling and Analysis Plan for the Ried Cleaners Site, Great Barrington, Berkshire County, Massachusetts*, dated December 2019.

During groundwater sampling, groundwater recharge in some monitoring wells was slow. Purging and parameter recording was stopped, and the slow-recharge wells were allowed to recharge prior to sampling. Groundwater sample GW-04 was collected the day following purging and parameter recording due to extremely slow recharge rate.

Description of Sampling Conducted

On 9 December 2019, EPA OSC Cofsky and START personnel Burton, Dupree, Evans, and Mace mobilized to the site to conduct sampling activities. START personnel advanced six borings to a maximum depth of 6 feet below ground surface (bgs). Soil from the borings was classified using the Burmister soil classification system, and samples were collected from each foot interval (A through F) in most cases. Soil was collected in pre-preserved vials for volatile organic compound (VOC) analysis. A total of 36 samples were collected, including one duplicate.

On 10 December 2019, START personnel collected 12 groundwater samples from 11 monitoring wells from the site and nearby properties. Monitoring wells were accessed, and depth to water and total well depth were measured. The wells were then purged through a YSI flow cell, and water parameter readings were documented. At the completion of purging, samples were collected for VOC analysis.

Due to slow recharge rates, some monitoring wells were allowed to recharge prior to sampling (samples GW-06 and GW-12). One monitoring well (sample GW-04) was allowed to recharge overnight due to extremely slow recharge.

On 11 December 2019, START personnel collected one groundwater sample (GW-04). EPA and START personnel then prepared chain-of-custody records, and departed the site. All samples were delivered to the EPA New England Regional Laboratory (NERL) for analysis.

Comments

(X) Drinking Water:	<input type="checkbox"/> Private:	
	<input checked="" type="checkbox"/> Municipal:	According to Great Barrington Assistant Town Manager Rembold, the adjacent United States Postal Services (USPS) property overlies the far northern edge of a potential drinking water aquifer for towns to the south.
(X) Groundwater:		Underground storage tanks (USTs) were formerly located on site, and used to store chemicals for the dry cleaning process. Previous groundwater sampling has indicated the presence of these chemicals and breakdown products.
(X) Unrestricted Access:		The site is used as additional parking for the downtown area, and the bank on the northern-adjacent property.
(X) Population in Proximity:		The site is located in a busy downtown area, and a residential apartment building is located northwest of the site.
<input type="checkbox"/> Sensitive Ecosystem:		
<input type="checkbox"/> Other:		

Additional Procedures for Site Determination

Biological Evaluation **ATSDR** **None**

To be determined by the On-Scene Coordinator (OSC).

REMOVAL SITE INVESTIGATION

Site Determination

Depending on further information, criteria that may be met by the site include 40 CFR 300.415 [b] [2], parts:

- i. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances, pollutants or contaminants.
- ii. Actual or potential contamination of drinking water supplies or sensitive ecosystems.
- iii. Hazardous substances or pollutants or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release.
- iv. High levels of hazardous substances or pollutants or contaminants in soils largely at or near the surface, that may migrate.
- v. Weather conditions that may cause hazardous substances or pollutants or contaminants to migrate or be released.
- vi. Threat of fire or explosion.
- vii. The availability of other appropriate federal or state response mechanisms to respond to the release.
- viii. Other situations or factors that may pose threats to public health or welfare or the environment.

II. Narrative Chronology

Narrative Chronology

Introduction

The Ried Cleaners Site (the Site) is located at 218 Main Street in Great Barrington, Berkshire County, Massachusetts (MA) (see Appendix A, Figure 1) [1]. The approximately 0.29-acre property is identified on Town of Great Barrington Tax Assessor's Map number (No.) 14 as Lot No. 202. The property contains a one-story building in the southeast corner of the Site that is approximately 7,890 square feet, which was built in 1930. There was a second one-story dry-cleaning building with no basement, totaling 1,056 square feet, constructed in 1900, that was located in the southwest portion of the site which was demolished in 2008. The site is bordered to the north by a savings bank and Rosseter Street; to the west by residential and commercial properties; to the south by a United States Postal Service (USPS) facility and commercial properties; and to the east by Main Street (see Appendix A, Figure 2) [2].

The property was used as a dry-cleaning business for over 60 years until it ceased operations in 2006. In August 2008, the southwest building was demolished.

On 12 September 2008, preliminary excavation work was conducted at the site to determine the location of underground storage tanks (USTs) on the south side of the property, in the vicinity of the demolished building. Four USTs were uncovered: two were reportedly used for storing tetrachloroethylene (PCE), and were oriented vertically, each with a cone-shaped bottom; and two were used to store heating oil. At least one aboveground storage tank (AST), previously located in the vicinity of the USTs, was also used to store PCE. Prior to 12 September 2008, a 10,000-gallon UST was removed from the northwest corner of the property [3].

Also on 12 September 2008, four floor drains were found in the footprint of the former building, and soil samples were collected from beneath the former floor drains at the points of discharge. The soil samples were analyzed for volatile organic compounds (VOCs), volatile petroleum hydrocarbons (VPH), extractable petroleum hydrocarbons (EPH), polychlorinated biphenyls (PCBs), and total metals including arsenic, cadmium, chromium, lead, and mercury. Elevated concentrations of PCE [maximum of 181,000 milligrams per kilogram (mg/kg)] were detected in the soil samples. Trichloroethylene (TCE) was also detected, at a maximum concentration of 11.2 mg/kg.

On 15 September 2008, the four USTs were removed from the vicinity of the demolished building. Photoionization detector (PID) headspace screening of soil from the UST grave indicated 120 parts per million (ppm), which constituted a reportable release as listed in the Massachusetts Contingency Plan (MCP). The Massachusetts Department of Environmental Protection (MassDEP) was notified of the release, and assigned release tracking number (RTN) 1-17142. On 24 September 2008, MassDEP issued a Notice of Responsibility (NOR) for the release.

In December 2008, indoor air samples were collected from the remaining site building. PCE was detected in the indoor air samples at up to 0.0445 parts per million (ppm) or 0.302 milligrams per cubic meter (mg/m³).

In April 2009, Eco-Genesis advanced soil borings on the property, collected soil samples from the borings, and installed and sampled three groundwater monitoring wells. In addition, soil gas vent points were installed in nine boring locations. Groundwater was encountered between 3 and 6 feet below ground surface (bgs). Groundwater flow is suspected to flow from northwest to the southeast. PCE was detected at maximum concentrations of 89.7 mg/kg in soil and 108 milligrams per Liter (mg/L) in groundwater.

In February 2010, Eco-Genesis installed an additional three wells (MW-4 through MW-6) on the Site and the adjacent church property to the northwest. Groundwater samples were collected from the new and existing monitoring wells. Results indicated maximum concentrations of PCE at 119,000 micrograms per Liter ($\mu\text{g}/\text{L}$); TCE at 970 $\mu\text{g}/\text{L}$; and cis-1,2-dichloroethylene (cis-1,2-DCE) at 26,300 $\mu\text{g}/\text{L}$ [4].

Indoor air sampling of residences and businesses in the vicinity was also conducted. The results of this sampling event were not available [5].

In November 2010, on behalf of MassDEP, Shaw Environmental, Inc. (Shaw) installed monitoring wells MW-7 and MW-8 on the USPS property, south of the site; MW-9 and MW-10 on the Masonic Temple property, south of the USPS facility; and MW-11 and MW-12 on the Ried Cleaners Site. Soil samples were collected from the borings during well installation. Shaw collected groundwater samples from the existing wells, newly installed wells, and monitoring wells on adjacent properties. PCE was detected in groundwater samples at a maximum concentration of 94,000 $\mu\text{g}/\text{L}$ [6].

Shaw also conducted test-pit excavation in the area of the former western building. Volatile odors were noted during excavation, and elevated PID readings were recorded. Increasing PID readings during one excavation were cause for concern, and the excavation was stopped due to safety considerations. PID screening results for Test Pit 1 (TP-1) ranged from 398 ppm to 1,000 ppm, with the highest detection occurring within the former UST area. PID screening results from TP-2 and TP-3 were consistently greater than 9,999 ppm, and a strong chlorinated solvent odor was detected while performing the test-pit excavations. The highest PID screening result detected from TP-4 was 26 ppm, but no solvent odor was detected while excavating the test pit. One soil sample was collected from each of the test pits, and the soil samples were submitted for VOC, VPH, and EPH laboratory analysis.

Analytical results of the samples collected from the test-pits indicated that the following VOCs were detected in soil (maximum concentration and sample location in parentheses): PCE (5,600 mg/kg in TP-3); cis-1,2-DCE (0.011 mg/kg in TP-4); and TCE (0.044 mg/kg in TP-4). In addition, the following seven petroleum-related VOCs were detected above their respective reporting limits: 1,2,4-trimethylbenzene; 1,3,5-trimethylbenzene; 4-isopropyltoluene; 4-methyl-2-pentanone; n-butylbenzene; n-propylbenzene; and sec-butylbenzene.

Chlorinated solvent detections from samples TP-2 and TP-3 exceeded the MCP Method 1 soil category S-1, S-2, and S-3 soil standards.

The property was claimed by the town of Great Barrington for back taxes. The town subsequently obtained an EPA Brownfields grant to determine if any hazardous materials were present at the Site.

In July and September 2019, TRC Environmental Corporation (TRC) conducted a limited inspection for hazardous materials (hazardous materials inventory) at the Site. Activities included an asbestos survey of the remaining building; collection and analysis of debris/building material samples for asbestos; sampling and field analysis of paint chips for lead; sampling and analysis of caulking and glazing building components for PCBs; and documentation of other hazardous materials, such as mercury-containing items (electrical switches, thermostats, etc). Analytical results revealed that five types of building materials sampled contained $\geq 1\%$ asbestos. The X-Ray Fluorescence (XRF) field testing results indicated that levels of lead on surfaces ranged between 0.01 milligrams per cubic centimeter (mg/cm^2) (lower limit of quantification of the XRF) and 15.4 mg/cm^2 . Laboratory results of the analysis of the caulking bulk samples did not identify the presence of PCBs above 50 ppm, indicating the sampled materials are not considered a PCB Bulk Product Waste. Two of the three samples had detectable concentrations of PCBs: 1.1 ppm in one sample of exterior door caulking, and 4.2 ppm in one sample of exterior window caulking. The remaining sample did not have detections of PCBs above the laboratory reporting limits [7].

Site/Sampling Activities

On 6 November 2019, EPA On-Scene Coordinator (OSC) Mike Cofsky, Weston Solutions, Inc. Superfund Technical Assessment and Response Team (START) member Eric Ackerman, MassDEP representative Caprice Shaw, and Town of Great Barrington Assistant Town Manager Chris Rembold met at the site to conduct a site reconnaissance. START member Ackerman conducted a safety and operations meeting and signed the Site-specific Health and Safety Plan (HASP). The site HASP had been prepared as a separate document, entitled *Weston Solutions, Inc., Region I START IV Site Health And Safety Plan (HASP) for the Ried Cleaners Site, Great Barrington, Massachusetts*. START member Ackerman established a support zone and calibrated the air monitoring instruments, including a MultiRAE and a Ludlum 19A gamma radiation meter (MicroR). Background levels were recorded in the HASP as follows: volatile organic compounds (VOCs) = 0.0 parts per million (ppm); lower explosive limit (LEL) = 0%; oxygen (O_2) = 20.9%; carbon monoxide (CO) = 0.0 ppm; and MicroR = 10-15 microRoentgens per hour ($\mu\text{R}/\text{hr}$) [8, 9]. All personnel viewed and discussed the contamination at the rear (western) portion of the property where the former dry cleaning building and PCE and oil tanks were removed. All personnel also discussed possible future sampling activities, and START member Ackerman photodocumented the site and marked the property for DigSafe. No reading above background were noted on the air monitoring instruments.

On 9 December 2019, EPA OSC Cofsky and START personnel John Burton, Chris Dupree, Tyler Evans, and Bonnie Mace mobilized to the site to conduct sampling activities. START personnel conducted a tailgate safety meeting and reviewed and signed the HASP, and then established a support zone and calibrated a MultiRAE instrument for air monitoring. Background levels were recorded in the HASP as follows: VOCs = 0.0 ppm; LEL = 0%; O_2 = 20.9%; and CO = 0.0 ppm. START also verified DigSafe markings for underground utilities.

START personnel advanced six borings to a maximum depth of 6 feet below ground surface (bgs) (see Appendix B, Table 1 and Appendix C, Boring Logs). Prior to boring, each location was screened with a magnetic pipe locator to identify any unmarked utilities or structures. Soil from the borings was classified using the Burmister soil classification system, and samples were collected from each foot interval (A through F) in most cases; one combined sample (0-2 foot, "AB" interval) was collected from one boring (SB-02) [10]. Soil was collected in pre-preserved methanol vials for VOC analysis. A total of 36 samples were collected, including one duplicate. All boring locations were recorded using a Global Positioning System (GPS) unit (see Appendix A, Figure 3) and were photodocumented (see Appendix D) [11].

On 10 December 2019, EPA and START personnel located groundwater monitoring wells, using a magnetic pipe locator to find metal wellheads below snow, soil, and debris. START personnel then conducted low-flow groundwater parameter recordings at 12 monitoring wells located on the Site and adjacent properties. Personnel accessed each well, screened the headspace with the MultiRAE, and measured the depth to groundwater and total depth. Groundwater was then purged from the wells into the flow cell of a YSI water quality parameter instrument. Water quality parameters were recorded at 5-minute intervals until the readings stabilized [12]. Groundwater samples were then collected for VOC analysis. Due to slow recharge rates, two monitoring wells were allowed to recharge prior to sampling (samples GW-06 and GW-12). One monitoring well (sample GW-04) was allowed to recharge overnight due to extremely slow recharge.

Sampling activities were performed in accordance with the site Sampling and Analysis Plan (SAP), which has been prepared as a separate document, entitled *Sampling and Analysis Plan for the Ried Cleaners Site, Great Barrington, Berkshire County, Massachusetts*. Deviations from the SAP were documented, including the recharge-based groundwater sampling delays [13].

On 11 December 2019, START personnel returned to the site and collected one groundwater sample (GW-04), and documented recharge depth of one well. EPA and START personnel then documented samples on chain-of-custody records (see Appendix E), and prepared the samples for delivery to the laboratory.

A total of 51 samples, including 13 groundwater samples from temporary wells, 37 soil boring samples, and one rinsate blank, were collected during this investigation. All samples were delivered and submitted to the EPA New England Regional Laboratory (NERL) for VOC analysis.

Analytical Data Summaries

On 6 January 2020, START received the analytical data results from NERL [14, 15, 16]. These data are summarized in Appendix B, Tables 1 and 2, and are included in Appendix E.

Soil Samples

There were six compounds detected in soil samples collected on site (maximum contaminant level and sample location in parentheses): cis-1,2-dichloroethylene [3,122 micrograms per kilogram ($\mu\text{g}/\text{kg}$) in SB-02C]; TCE (3,003 $\mu\text{g}/\text{kg}$ in SB-02C); PCE (311,636 $\mu\text{g}/\text{kg}$ in SB-02C); 1,2,4-

trimethylbenzene (301 µg/kg in SB-02F); sec-butylbenzene (81 µg/kg in SB-02F); and n-butylbenzene (180 µg/kg in SB-02F). One compound, PCE, was detected at concentrations greater than the Massachusetts Contingency Plan Soil Category 2 (MCP-S2) standard.

Groundwater Samples

There were six compounds detected in groundwater samples collected on site (maximum contaminant level and sample location in parentheses): 2-propanone [240 micrograms per Liter (µg/L) in GW-03]; carbon disulfide (21 µg/L in GW-02); methyl-t-butyl ether (7.7 µg/L in GW-09); cis-1,2-dichloroethylene (6,100 µg/L in GW-04); TCE (2,600 µg/L in GW-04); and PCE (130,000 µg/L in GW-06). One compound, cis-1,2-dichloroethylene, was detected at concentrations greater than the Massachusetts Contingency Plan Groundwater Category 2 (MCP-GW2) standard. Two compounds, TCE and PCE, were detected at concentrations greater than the MCP-GW2 standard and the EPA Vapor Intrusion Screening Level (VISL).

ANALYTICAL METHODS

Samples analyzed by U.S. EPA Laboratory Services and Applied Sciences Division as follows:
 VOCs: EPA Region I SOP, LSBSOP-VOAGCMS10, VOAs in Soil or Water High Level Method.

NOTES:

- 1) µg/kg = micrograms per kilogram
- 2) ND = Not Detected.
- 3) MCP-S2 = Massachusetts Contingency Plan S-2 Standard
- 4) EPA RML-Ind = US EPA Removal Management Level for Industrial Soil
- 5) Values bolded and shaded in yellow indicate compounds exceeding MCP S-2 Standard.
- 6) Values bolded and shaded in red indicate compounds exceeding the EPA Industrial RML.
- 7) Results are reported in the units noted.
- 8) A compound is listed in the table above only if it was detected in at least one of the samples analyzed. Compounds that were analyzed for, but not detected, have been omitted.

Boring Logs

Project/Site	Ried Cleaners Site	Boring ID	SB-01	Groundwater Levels	
Location	Great Barrington, MA	Well ID	N/A	Date	Depth (ft)
Date Drilled	9-Dec-2019	Drilling Method	Direct Push	N/A	N/A
Drilling Company	Weston Solutions, Inc.	Sampling Method	4-ft Macrocore		
Drill Rig Type	Electric Hammer	Completion Depth	6 ft bgs		
Foreman	Tyler Evans	Surface Elevation	N/A		
Logged by	Chris Dupree, Weston, Superfund Technical Assessment and Response Team (START)				
Depth (ft bgs)	Recovery (inches)	Soil Description*			PID (ppm)
1	29	0-3"	Dark brown fine SAND and SILT, little organics (leaves, roots), trace fine gravel.		1.6
		3-7"	Light brown fine to coarse SAND trace organics.		12.1
		7-21"	Brown fine to coarse SAND and SILT, trace fine to coarse gravel, trace organics, trace debris (glass, brick, asphalt).		8.1
		21-29"	Dark brown SILT and fine coarse SAND, little clay, moist, trace fine gravel.		5.4
4	19	0-2"	Brown fine to coarse SAND, trace gravel.		8.6
		2-10"	Brown SILT and fine to coarse SAND, trace clay.		8.5
		10-11"	Dark brown/black/red DEBRIS and GRAVEL.		30
		11-16"	Gray fine to coarse SAND fine to coarse gravel.		17.3
		16-19"	Gray SILT and fine SAND, trace clay, trace fine gravel, petroleum odor.		286.2
		-End of Boring at 6 feet-			237.8

Sample Collection Details

- Sample SB-01A:** Collected from 3- 7" interval at 1225 hrs.
Sample SB-01B: Collected from 7- 14" interval at 1227 hrs.
Sample SB-01C: Collected from 14 - 21" interval at 1229 hrs.
Sample SB-01D: Collected from 21 - 29" interval at 1232 hrs.
Sample SB-01E: Collected from 2 - 10" interval at 1245 hrs.
Sample SB-01F: Collected from 16 - 19" interval at 1248 hrs.

Appendix E
Analytical Data and Chain-of-Custody Records

Laboratory Report

January 06, 2020

Mike Cofsky - Mail Code 02-2
US EPA New England R1

Project Number: 19120013
Project: Ried Cleaners - Great Barrington, MA
Analysis:VOAs in Soil High Level Method
EPA Chemist: Allison Connors

Date Samples Received by the Laboratory: 12/11/2019

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, LSBSOP-VOAGCMS10.

Samples were analyzed by GC/MS. Samples were introduced to the GC via a Tekmar preconcentrator and an Archon auto-sampler. The analysis SOP is based on US EPA Method 8260B, revision 2.0, 1996 and Method 5035A, draft revision 1, 2002, from SW-846.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

Digital signed by DANIEL BOUDREAU

RL = Reporting limit

ND = Not Detected above Reporting limit

NA = Not Applicable due to high sample dilutions or sample interferences

NC = Not calculated since analyte concentration is ND.

J = Estimated value

J1 = Estimated value due to MS recovery outside acceptance criteria

J2 = Estimated value due to LFB result outside acceptance criteria

J3 = Estimated value due to RPD result outside acceptance criteria

J4 = Estimated value due to LCS result outside acceptance criteria

E = Estimated value exceeds the calibration range

L = Estimated value is below the calibration range

B = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.

R = No recovery was calculated since the analyte concentration is greater than four times the spike level.

P = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.

C = The identification has been confirmed by GC/MS.

A = Suspected Aldol condensation product.

N = Tentatively identified compound.

95-50-1	1,2-Dichlorobenzene	1600	50	
104-51-8	N-Butylbenzene	ND	50	
96-12-8	1,2-Dibromo-3-Chloropropane	ND	50	
120-82-1	1,2,4-Trichlorobenzene	4400	50	
87-68-3	Hexachlorobutadiene	ND	50	
91-20-3	Naphthalene	ND	50	
87-61-6	1,2,3-Trichlorobenzene	3200	50	

Surrogate Compounds	Recoveries (%)	QC Ranges
1,2-Dichloroethane-D4	101	85 - 131
Toluene-D8	100	84 - 118
1,4-Bromofluorobenzene	100	56 - 125

Comments: Results are reported from both 50x and 200x dilutions. The 200x dilution was prepared and analyzed on 12/18/19.

J-estimated value due to failure to meet continuing calibration criterion.

VOAs in Soil High Level Method

Client Sample ID:	0346-0020	Lab Sample ID:	AB84813
Date of Collection:	12/09/2019	Matrix:	Soil
Date of Preparation:	12/17/2019	Amount Prepared:	5 mL
Date of Analysis:	12/17/2019	Percent Solids:	91%
Dry Weight Prepared:	7.241 grams	Extract Dilution:	50
Wet Weight Prepared:	7.957 grams	pH:	N/A
Volume Extracted:	5 mL	GPC Factor:	N/A
Final Volume:	N/A		

CAS Number	Compound	Concentration ug/Kg	RL ug/Kg	Qualifier
591-78-6	2-Hexanone	ND	74	
630-20-6	1,1,1,2-Tetrachloroethane	ND	74	
100-41-4	Ethylbenzene	ND	74	
108-38-3/106-42-3	M/P Xylene	ND	150	
95-47-6	Ortho Xylene	ND	74	
100-42-5	Styrene	ND	74	
75-25-2	Bromoform	ND	74	
79-34-5	1,1,2,2-Tetrachloroethane	ND	74	
98-82-8	Isopropylbenzene	ND	74	
108-86-1	Bromobenzene	ND	74	
96-18-4	1,2,3-Trichloropropane	ND	74	
103-65-1	N-Propylbenzene	ND	74	
95-49-8	2-Chlorotoluene	ND	74	
106-43-4	4-Chlorotoluene	ND	74	
98-06-6	Tert-Butylbenzene	ND	74	
108-67-8	1,3,5-Trimethylbenzene	ND	74	
95-63-6	1,2,4-Trimethylbenzene	ND	74	
135-98-8	Sec-Butylbenzene	ND	74	
541-73-1	1,3-Dichlorobenzene	ND	74	
99-87-6	Para-Isopropyltoluene	ND	74	
106-46-7	1,4-Dichlorobenzene	ND	74	
95-50-1	1,2-Dichlorobenzene	ND	74	
104-51-8	N-Butylbenzene	ND	74	
96-12-8	1,2-Dibromo-3-Chloropropane	ND	74	
120-82-1	1,2,4-Trichlorobenzene	ND	74	
87-68-3	Hexachlorobutadiene	ND	74	
91-20-3	Naphthalene	ND	74	
87-61-6	1,2,3-Trichlorobenzene	ND	74	

Surrogate Compounds	Recoveries (%)	QC Ranges
1,2-Dichloroethane-D4	97	85 - 131
Toluene-D8	99	84 - 118
1,4-Bromofluorobenzene	98	56 - 125

Laboratory Report

January 06, 2020

Mike Cofsky - Mail Code 02-2
US EPA New England R1

Project Number: 19120014

Project: Ried Cleaners - Great Barrington, MA

Analysis:VOAs in Soil High Level Method

EPA Chemist: Allison Connors

Date Samples Received by the Laboratory: 12/11/2019

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, LSBSOP-VOAGCMS10.

Samples were analyzed by GC/MS. Samples were introduced to the GC via a Tekmar preconcentrator and an Archon auto-sampler. The analysis SOP is based on US EPA Method 8260B, revision 2.0, 1996 and Method 5035A, draft revision 1, 2002, from SW-846.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

Digitally signed by DANIEL BOUDREAU

Qualifiers:

RL = Reporting limit

ND = Not Detected above Reporting limit

NA = Not Applicable due to high sample dilutions or sample interferences

NC = Not calculated since analyte concentration is ND.

J = Estimated value

J1 = Estimated value due to MS recovery outside acceptance criteria

J2 = Estimated value due to LFB result outside acceptance criteria

J3 = Estimated value due to RPD result outside acceptance criteria

J4 = Estimated value due to LCS result outside acceptance criteria

E = Estimated value exceeds the calibration range

L = Estimated value is below the calibration range

B = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.

R = No recovery was calculated since the analyte concentration is greater than four times the spike level.

P = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.

C = The identification has been confirmed by GC/MS.

A = Suspected Aldol condensation product.

N = Tentatively identified compound.

Laboratory Report

January 06, 2020

Mike Cofsky - Mail Code 02-2
US EPA New England R1

Project Number: 19120014

Project: Ried Cleaners - Great Barrington, MA

Analysis: VOAs in Water

EPA Chemist: Allison Connors

Date Samples Received by the Laboratory: 12/11/2019

Analytical Procedure:

All samples were received and logged in by the laboratory according to the USEPA New England Laboratory SOP for Sample Log-in.

Sample preparation and analysis was done following the EPA Region I SOP, LSBSOP-VOAGCMS10.

Samples were analyzed by GC/MS. Samples were introduced to the GC via a Tekmar pre-concentrator and an Archon autosampler. The analysis SOP is based on US EPA Method 8260B, method 5030B, rev 2.0 SW-846, Rev 2.0,1996. Method 624, 40CFR Part 136 Appendix A, July 1, 1992, and USEPA CLP SOW for Organic Analysis OLM04.2, 1999.

Data were reviewed in accordance with the internal verification procedures described in the EPA New England Quality Manual for NERL.

Results relate only to the items tested or to the samples as received by the Laboratory. This analytical report shall not be reproduced except in full, without written approval of the laboratory.

If you have any questions please call me at 617-918-8340 .

Sincerely,

RL = Reporting limit

ND = Not Detected above Reporting limit

NA = Not Applicable due to high sample dilutions or sample interferences

NC = Not calculated since analyte concentration is ND.

J = Estimated value

J1 = Estimated value due to MS recovery outside acceptance criteria

J2 = Estimated value due to LFB result outside acceptance criteria

J3 = Estimated value due to RPD result outside acceptance criteria

J4 = Estimated value due to LCS result outside acceptance criteria

E = Estimated value exceeds the calibration range

L = Estimated value is below the calibration range

B = Analyte is associated with the lab blank or trip blank contamination. Values are qualified when the observed concentration of the contamination in the sample extract is less than 10 times the concentration in the blank.

R = No recovery was calculated since the analyte concentration is greater than four times the spike level.

P = The confirmation value exceeded 35% difference and is less than 100%. The lower value is reported.

C = The identification has been confirmed by GC/MS.

A = Suspected Aldol condensation product.

N = Tentatively identified compound.
